Profile Summary

Backend Developer with 4+ years of experience building scalable, high-performance systems using Java, Spring Boot, Python, and AWS. Proficient in developing microservices, distributed systems, and cloud-native applications, with experience integrating AI /LLM-powered solutions, workflow automation, and intelligent APIs. Skilled in enhancing system efficiency, reducing latency, and aligning technical solutions with strategic business goals.

Education

Indian Institute Of Technology Varanasi (IIT BHU)

2018 - 2022

BTech

- GPA: 7.83/10.0

Technologies

Coding Languages: Java, C++, Python, SQL, HTML

AI & Automation: LLMs, AI Agents, Prompt Engineering, Workflow Automation, n8n, AI API Integration

DB & Frameworks: MySQL, PostgreSQL, Redis, Spring, Spring Boot, Hibernate

Tools/Concepts: RabbitMQ, Kafka, Git, GitLab, AWS, Data Structures & Algorithms, DBMS, Microservices

Experience

Nouveau Labs

November 2025 - Present

Software Engineer

- Eliminated a major user journey bottleneck by architecting a real-time presentation hold feature, removed complete manual intervention and significantly improving product stickiness.
- Led the design and development of a repayment system supporting over 5M transactions/day, enabling real-time mandate presentation and downstream sync.
- Contributed to an AI-powered SDLC automation platform using n8n, Jira, GitLab, and LLM-based agents that automated requirement analysis, code modification, merge request, and deployment to testing environments.

ADITYA BIRLA CAPITAL

Feb 2024 - November 2025

Senior Software Engineer

- Spearheaded API performance optimizations by refining system interactions, improving response times by 30%, and removing redundant DB calls to elevate system efficiency.
- Led migration of Java-based microservices by upgrading from Java 8 to Java 25, driving framework and dependency upgrades, strengthening security, and enabling adoption of modern JVM and language capabilities.
- Redesigned and refactored legacy codebases, enhancing code quality and maintainability while eliminating over 10,000 lines of redundant or inefficient code to reduce technical debt.

ZestMoney

June 2022 - Feb 2024

Software Engineer

- Developed a lender-specific loan approval workflow, reducing average approval time by 25% and integrating with more than 10 third-party lender APIs reducing approval time and enhancing user experience.
- Developed and maintained an intelligent customer retry mechanism, resulting in a 30% increase in loan disbursement rate by automating failure recovery and reducing manual intervention.
- Managed the entire loan lifecycle, resolving EMI issues, improving financial accuracy, and enhancing product stability through systematic debugging and code reviews.

Projects

Customer Retry

- Designed and implemented an intelligent retry mechanism for rejected loan applications, automating root-cause resolution and reducing manual interventions, resulting in improved customer success rates by 30%.
