

The Job Agent Application Lifecycle

A Systemic Walkthrough from Setup to Submission

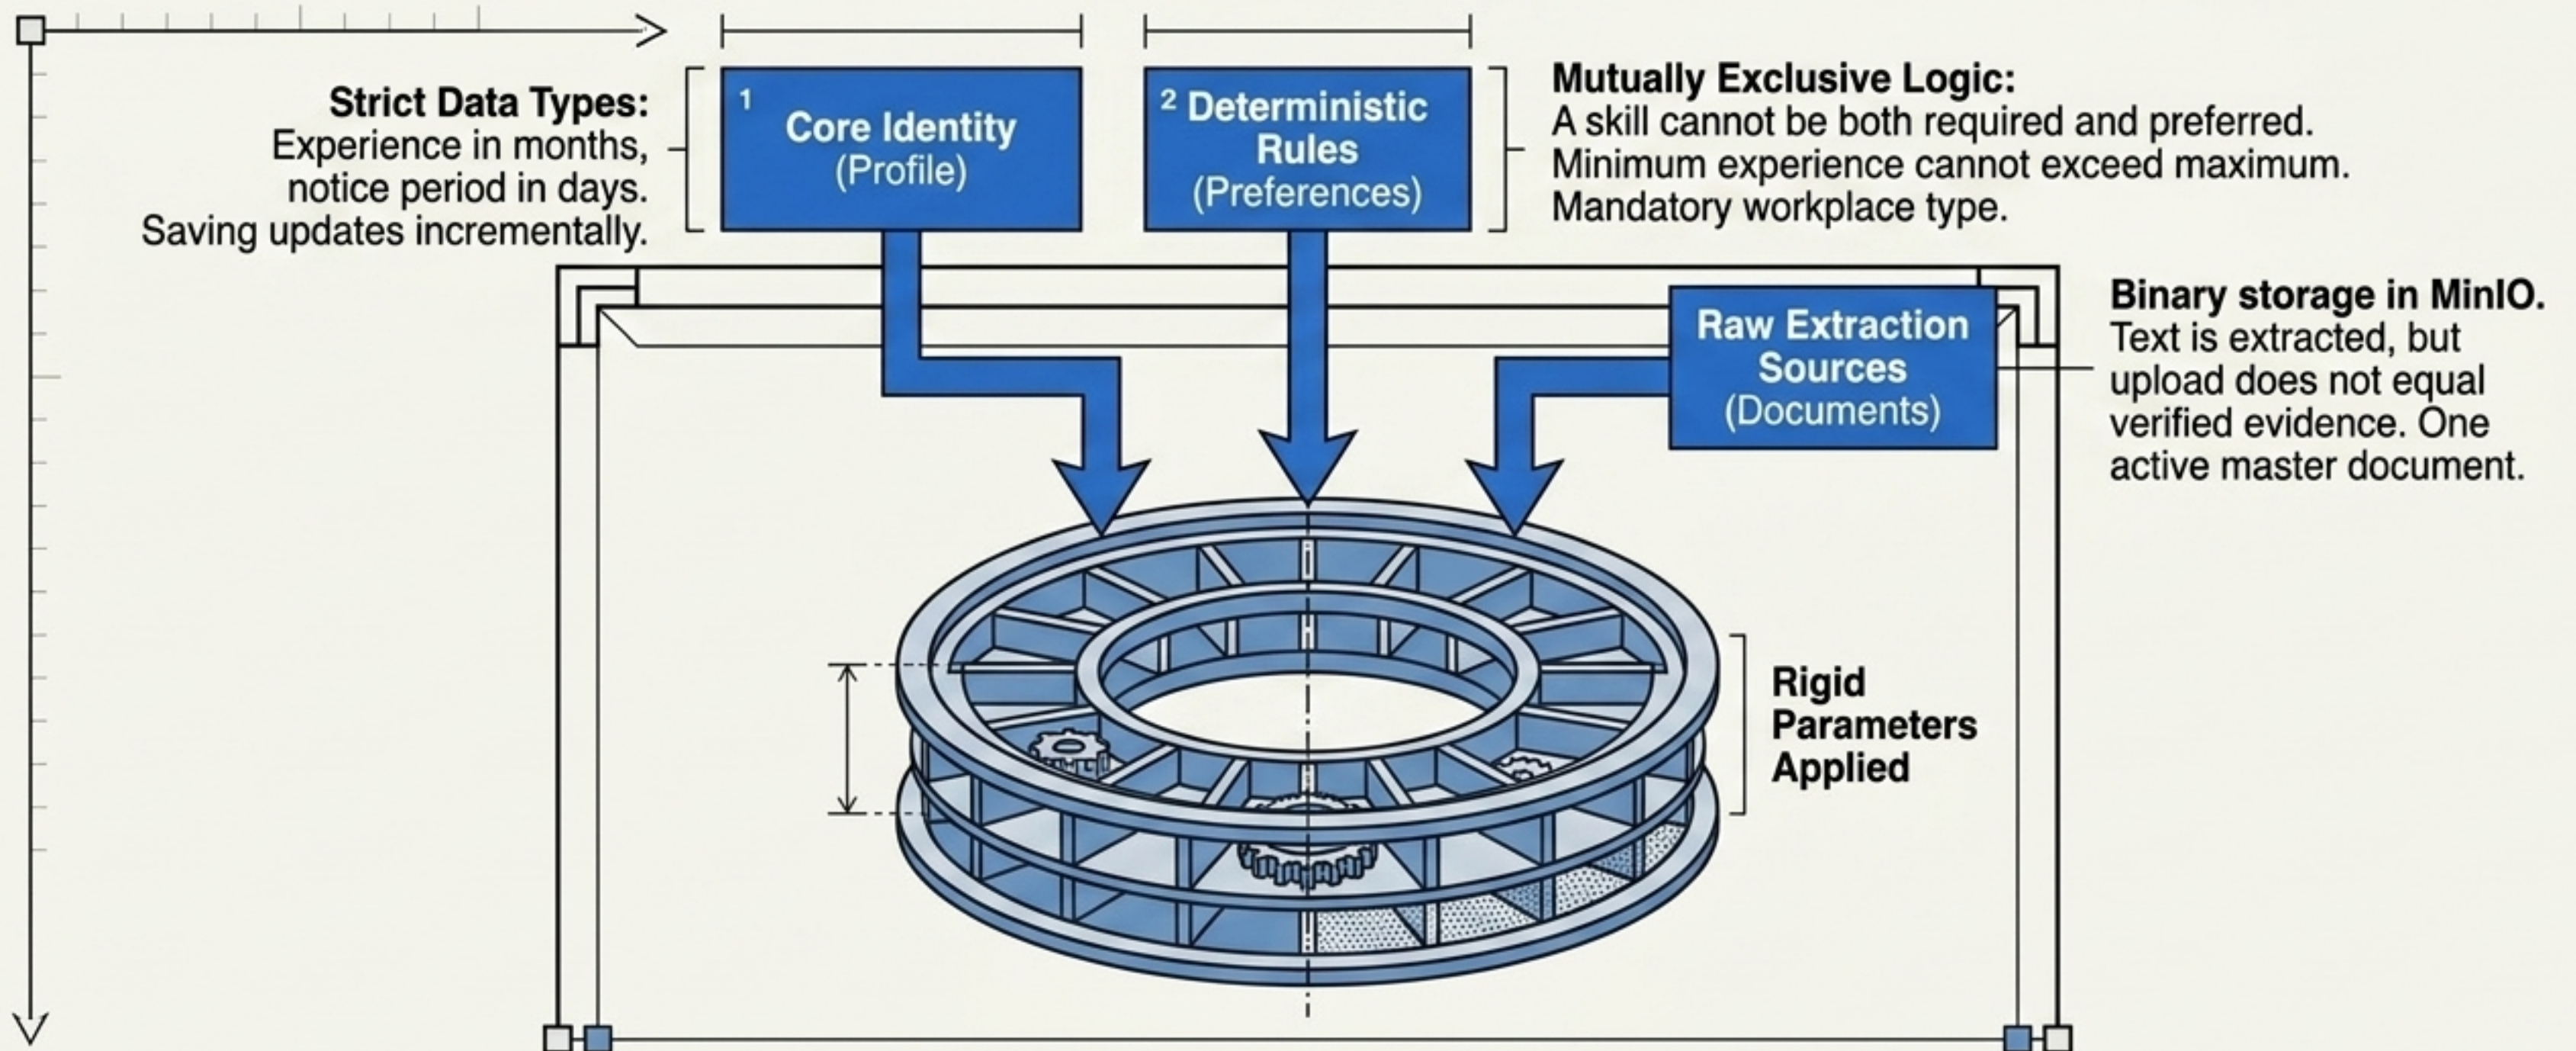

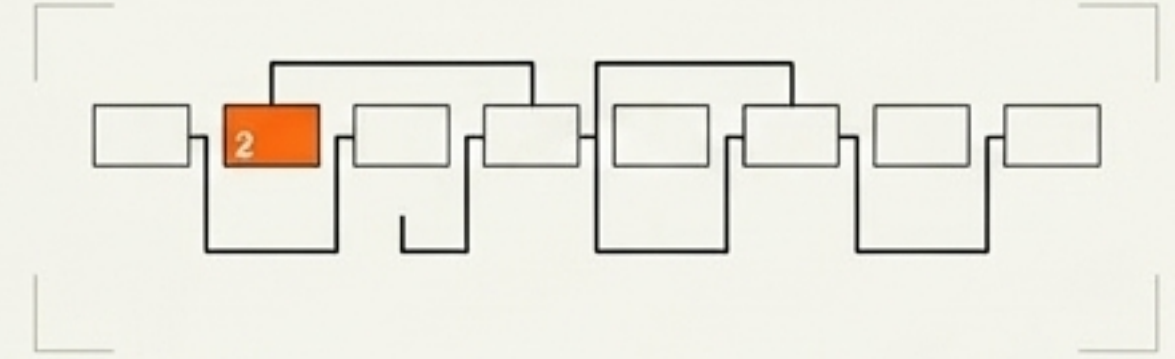

The 8-Phase Architectural Pipeline

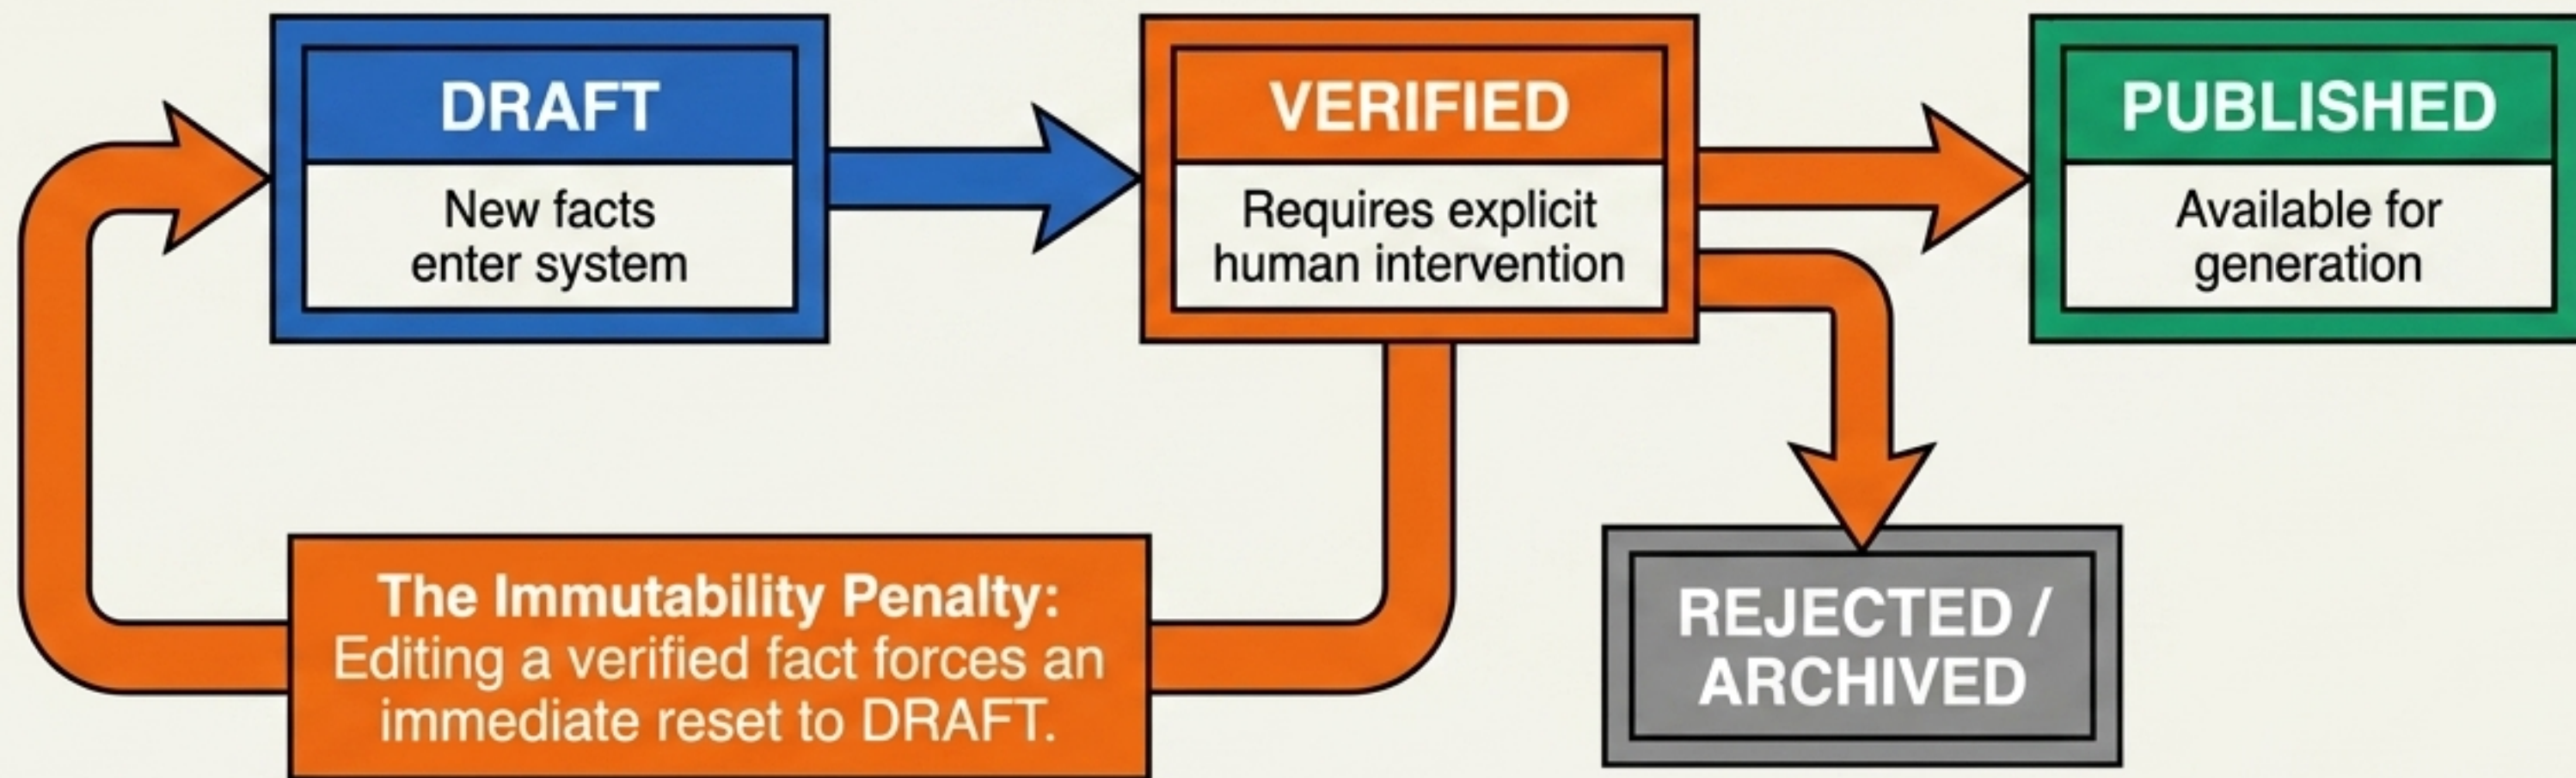

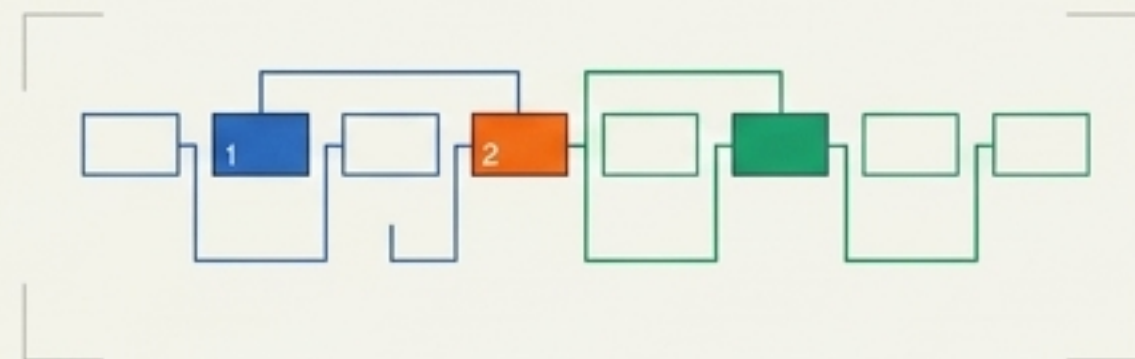

Phase 1: Security, Authorisation, and Volatile Access

Phase 2: The Data Funnel and Deterministic Rules

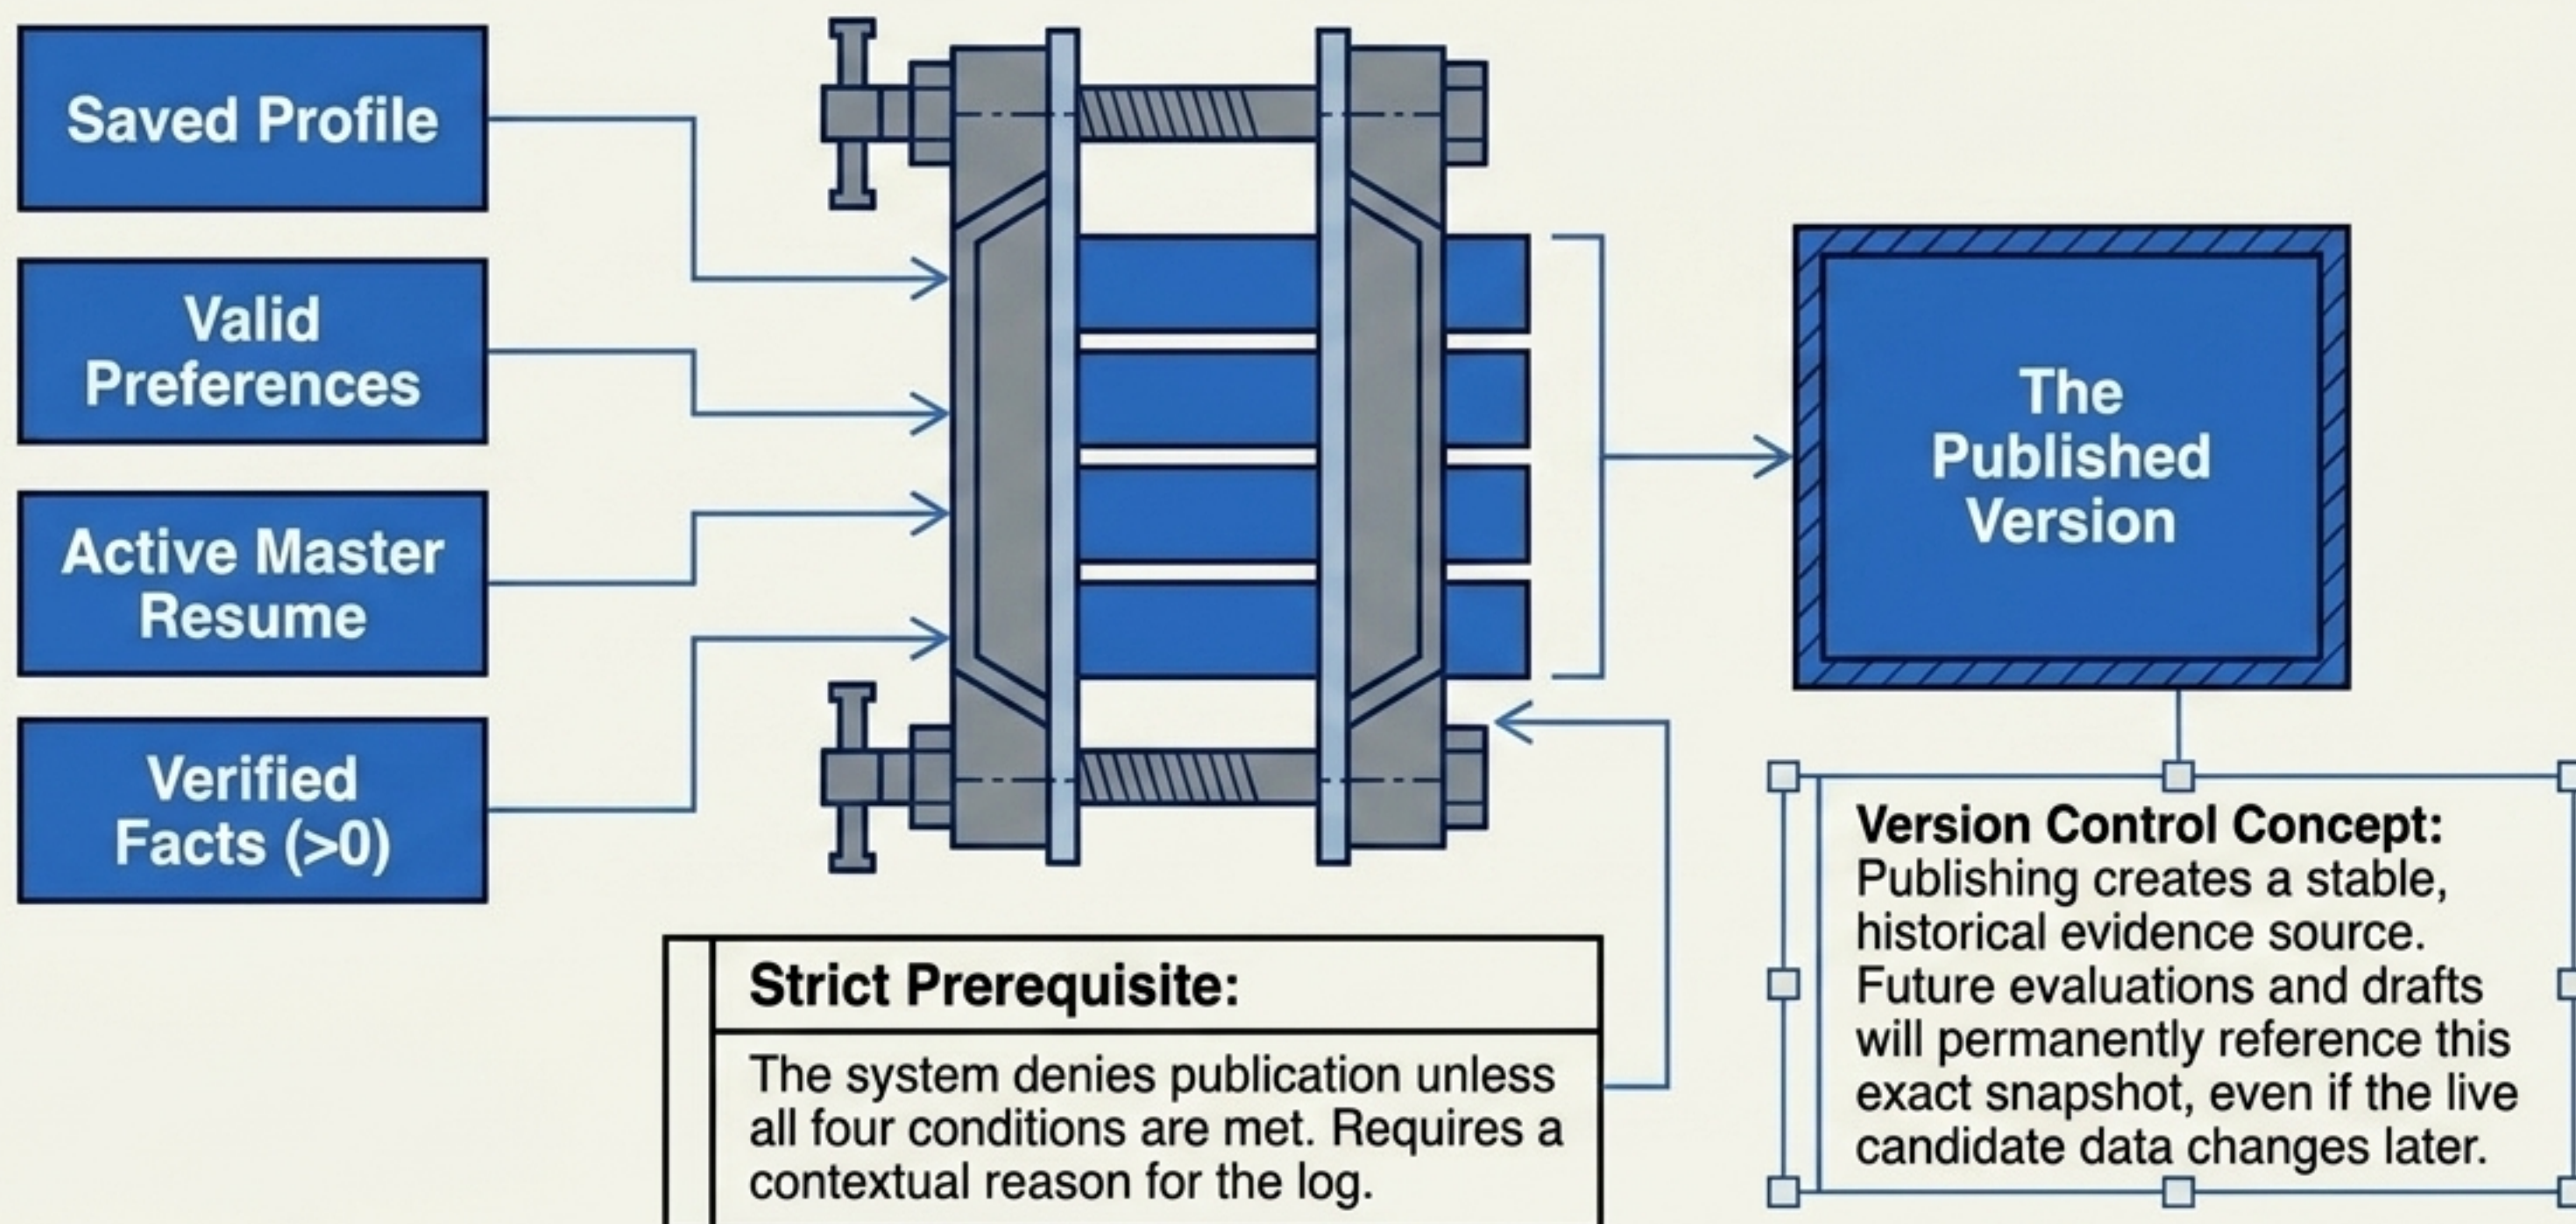

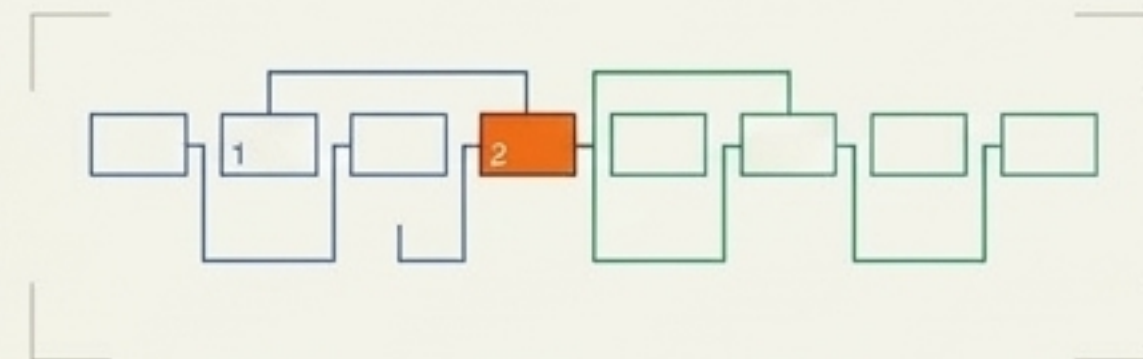

The Evidence Bank: Preventing AI Hallucinations

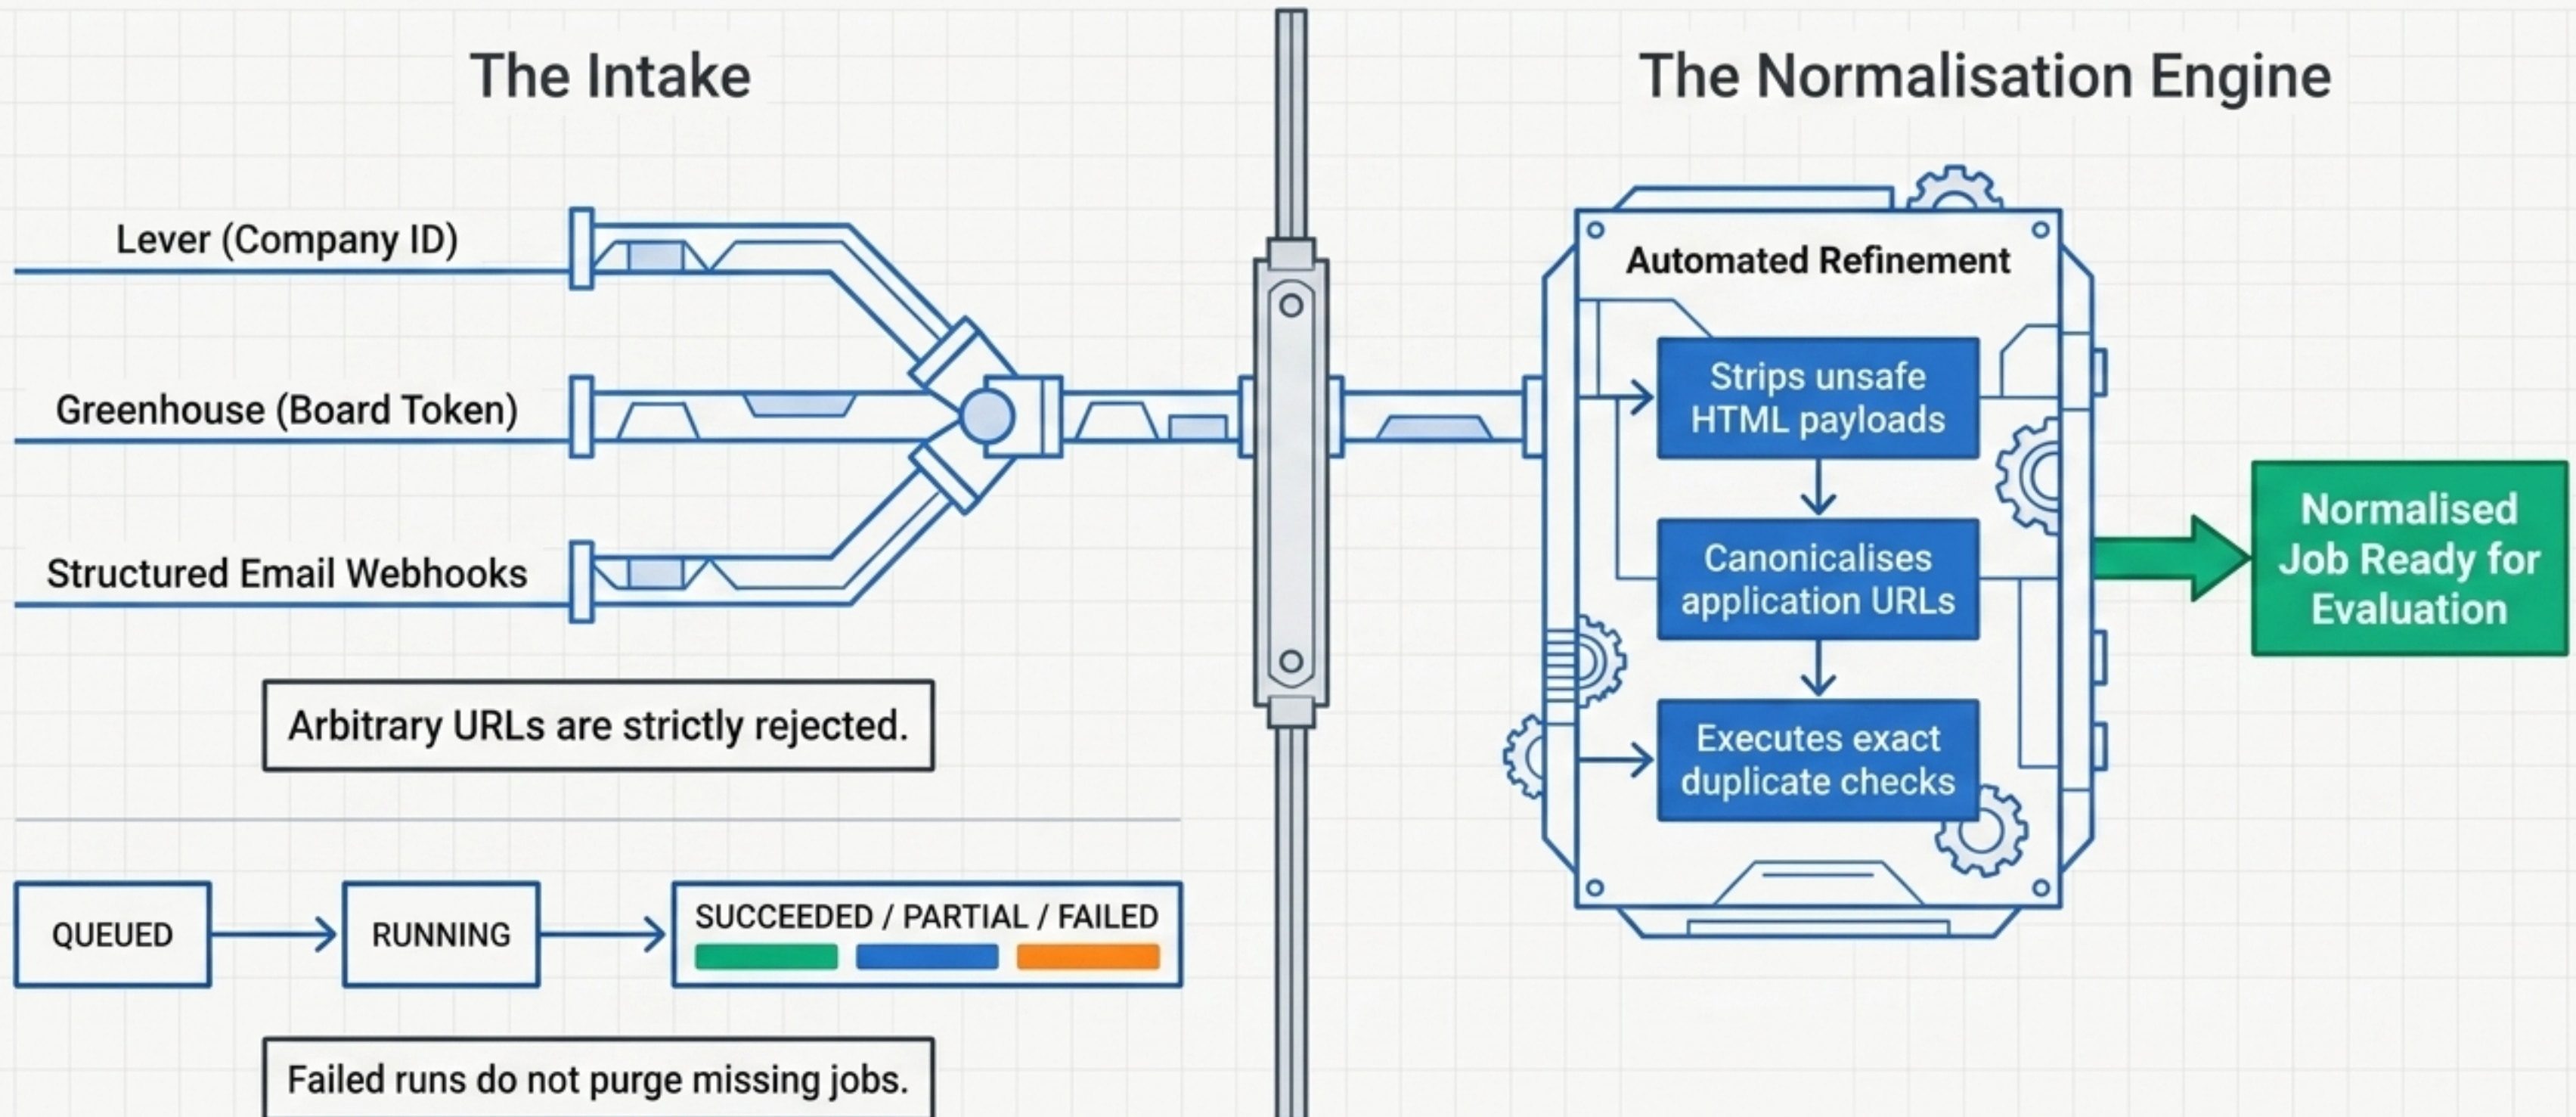

The Prime Directive

Generated drafts are structurally prevented from inventing experience. All outputs rely exclusively on explicitly verified resume facts and reviewed reusable answers.

The Immutable Snapshot: Locking the Foundation

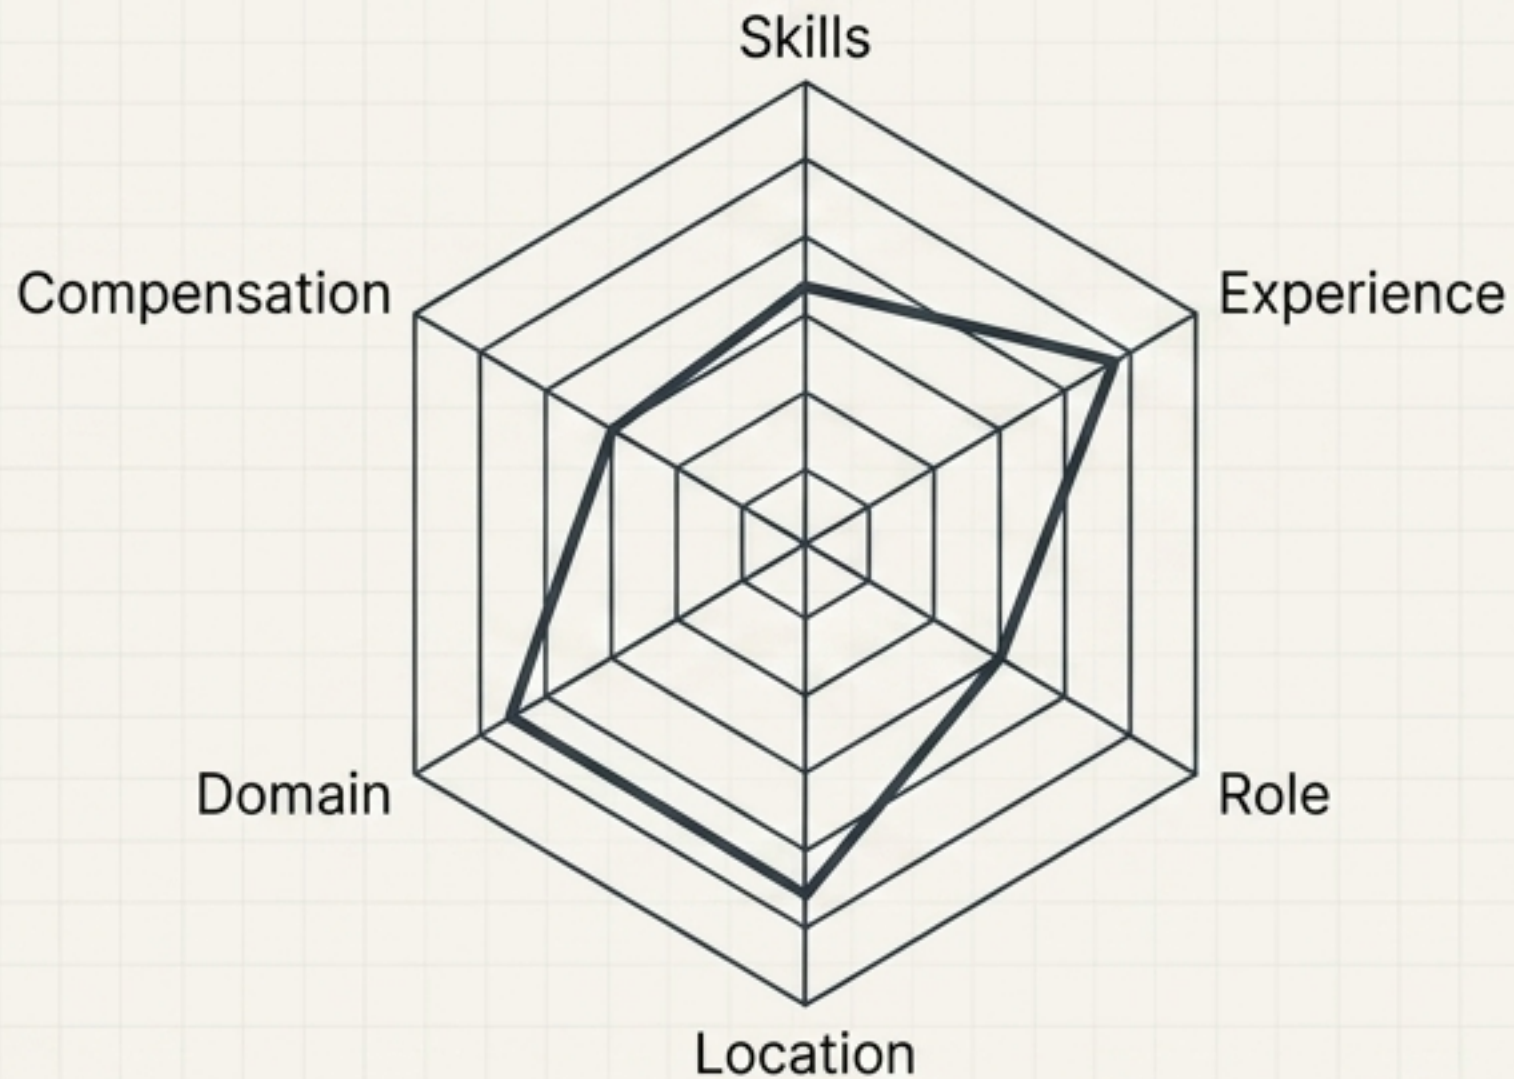

Phase 3: The Job Collection and Normalisation Engine

Phase 4: Matching Logic and Evaluation Weights

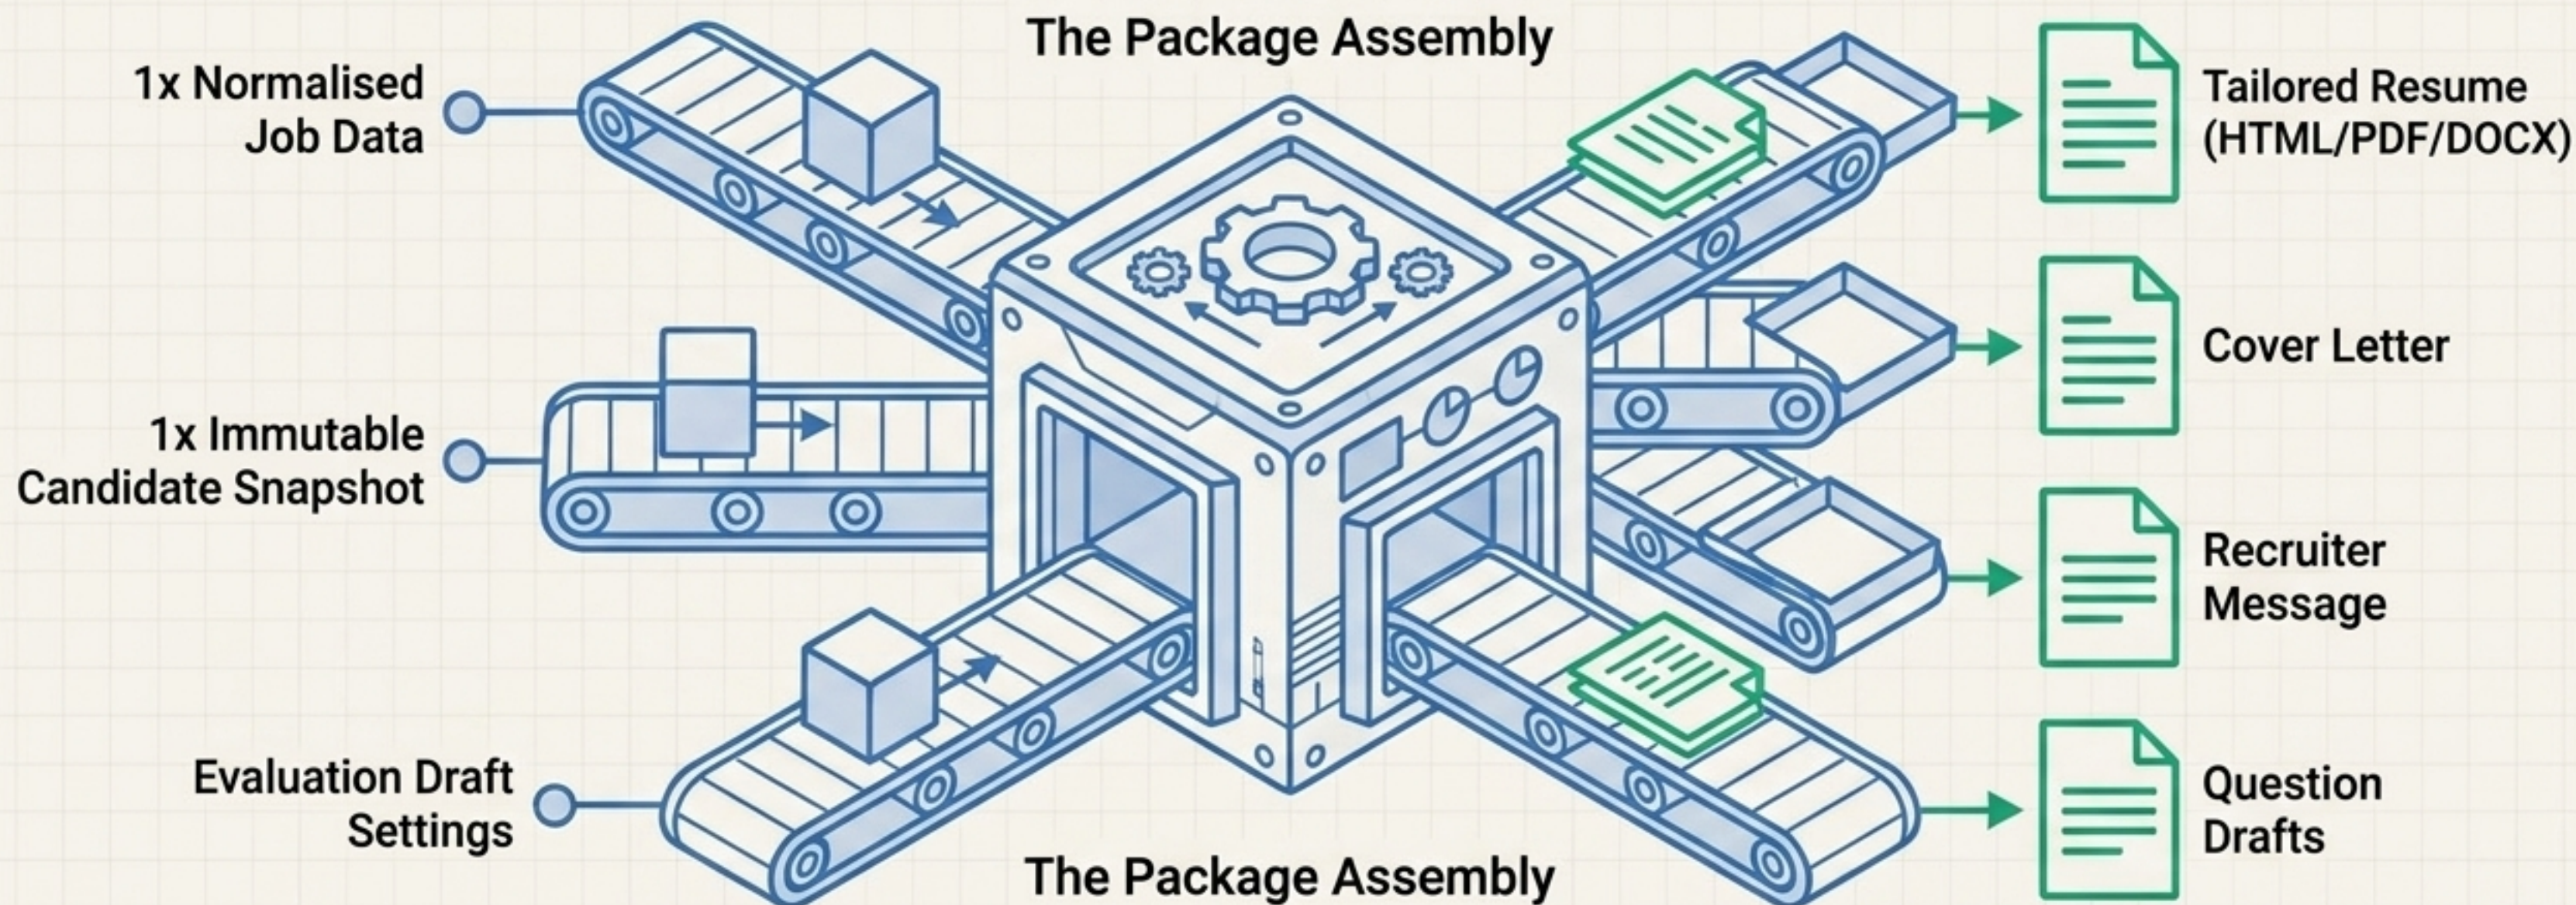

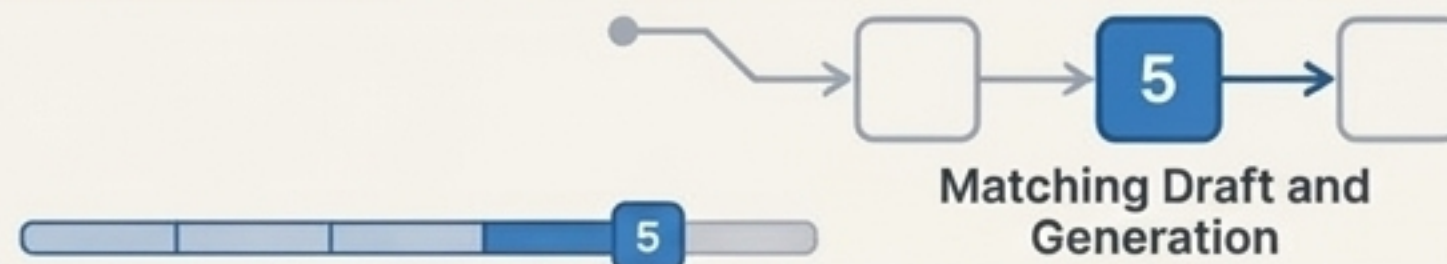

$\sum \text{Weights} = 100$

System Warning: Altering any matching parameters immediately renders all older historical evaluations stale.

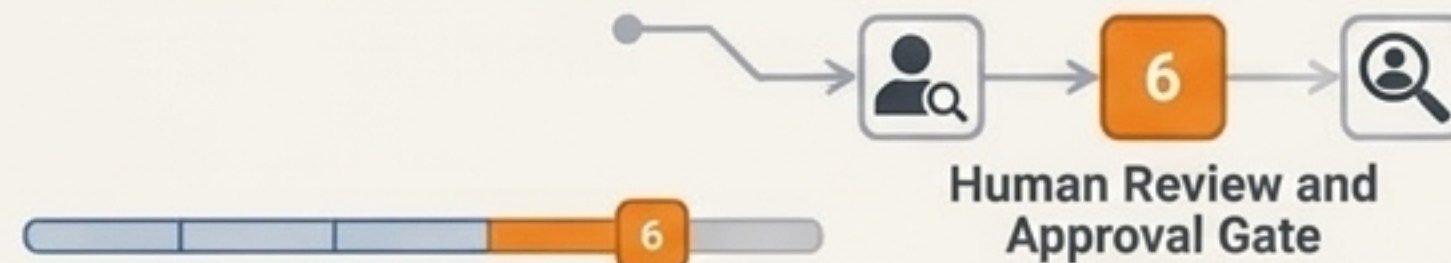

Phase 5: Application Draft Generation

The Invalidation Rule

Historical revisions are strictly read-only. Editing generated content on the current draft immediately invalidates any prior validations or approvals, forcing a completely new review cycle.

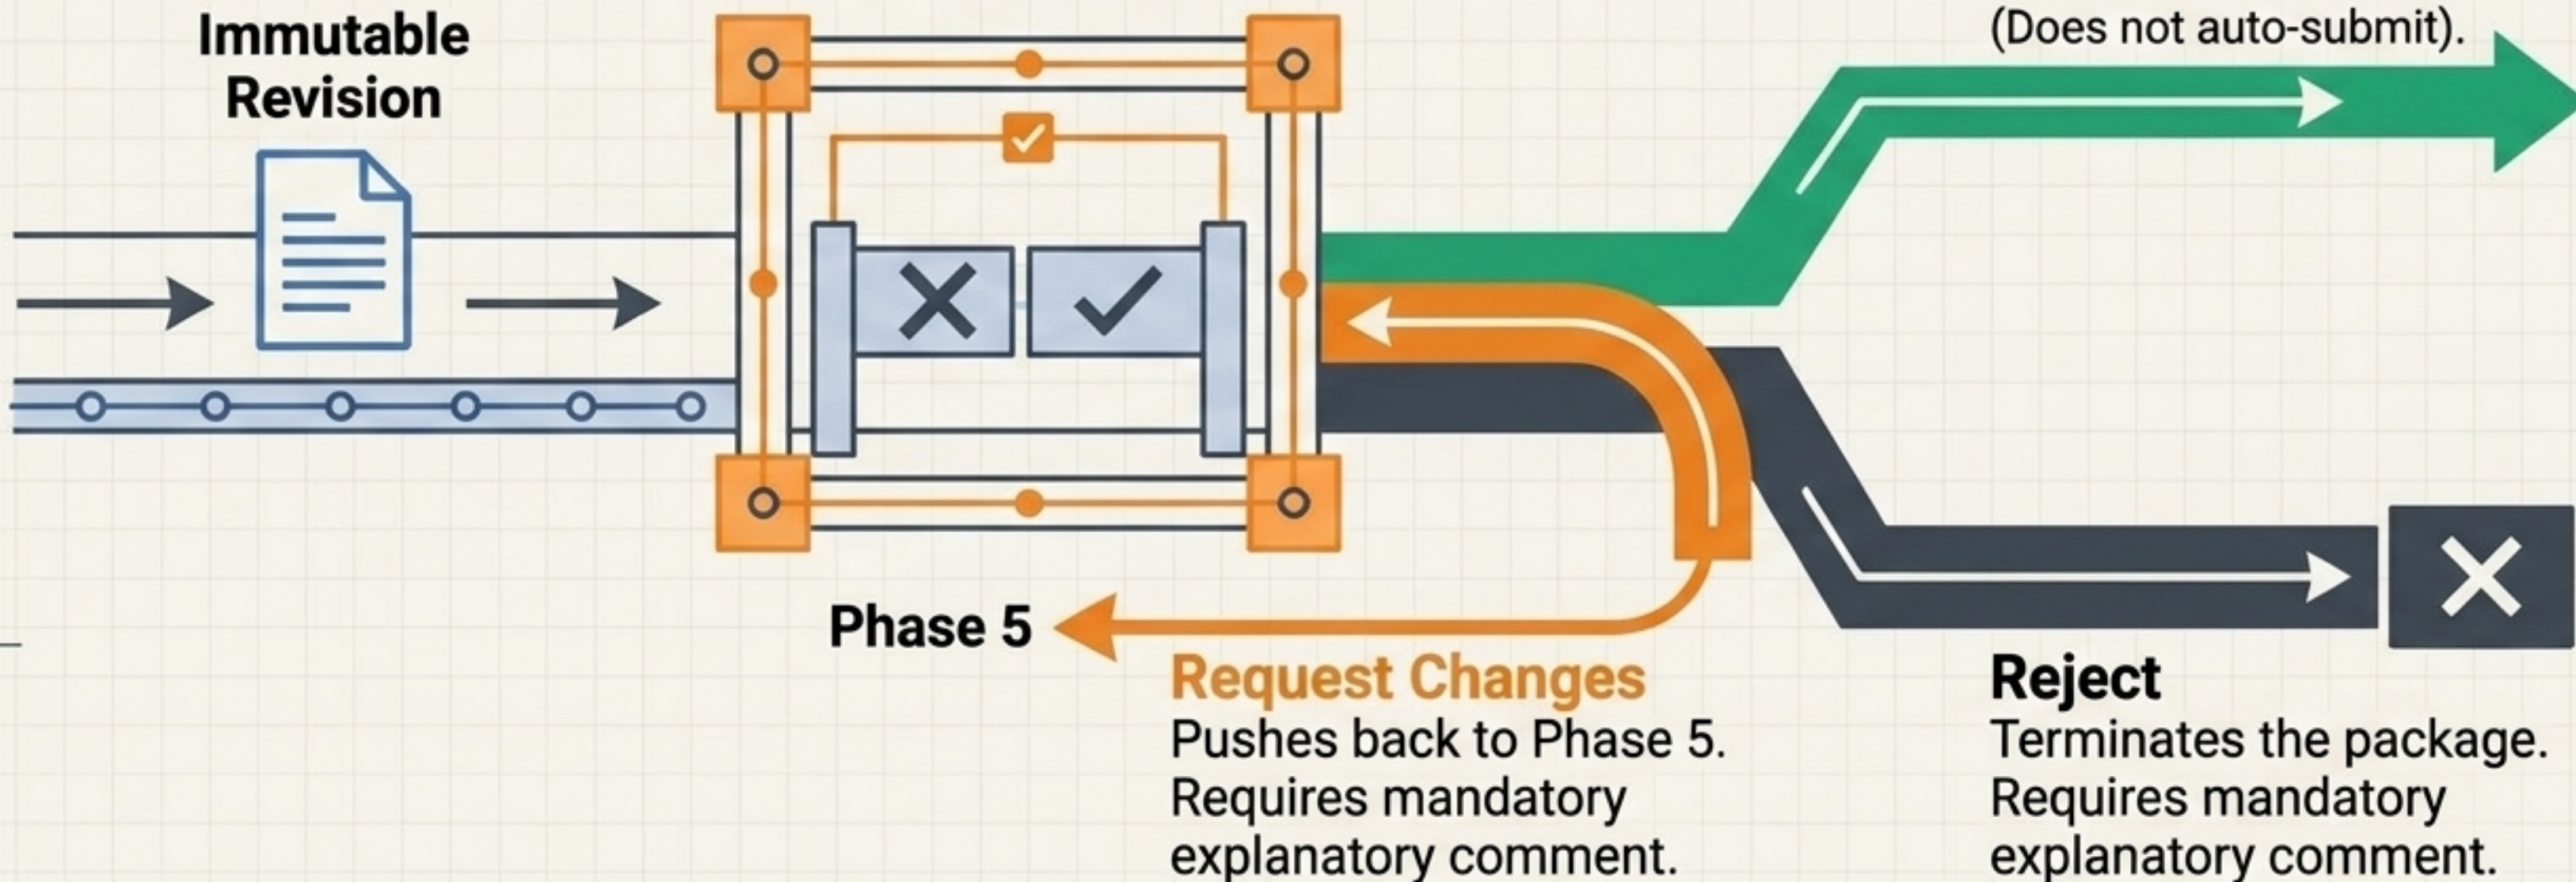

Phase 6: Human Review and the Approval Gate

Human Review and Approval Gate

- ✓ **Inspect:**
- ✓ Facts
- ✓ Artifact Files
- ✓ Generated Claims
- ✓ System Warnings.

Immutable Revision

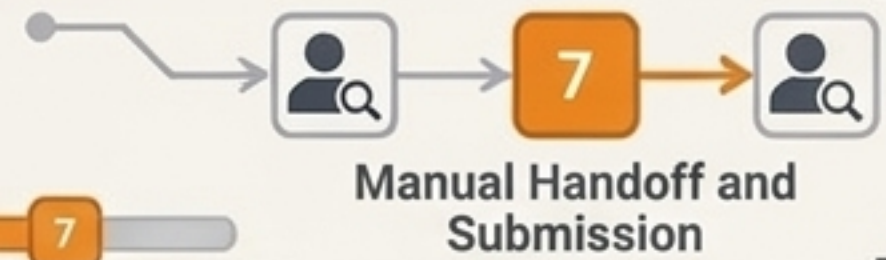

The State Distinction Matrix: Clarifying the Lifecycle

	READY 	APPROVED 	SUBMITTED 
Definition	A generated application draft exists.	Cleared for handoff by a human reviewer.	External application successfully completed.
Immutability State	Unverified. Highly mutable; content can be regenerated. 	Locked and immutable. Any edit reverts the state. 	Archived permanently. 
Next Required Action	Requires Phase 6 Human Review. 	Requires Phase 7 Manual Submission. 	Enters Phase 8 Tracking. 

Phase 7: Manual Handoff Submission Kits

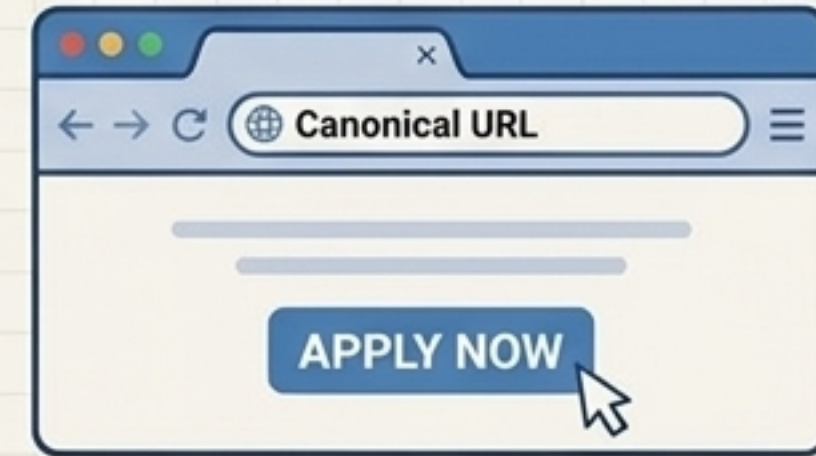

System Boundary: The Job Agent does NOT auto-submit forms.

Submission Kit

Approved Artifacts

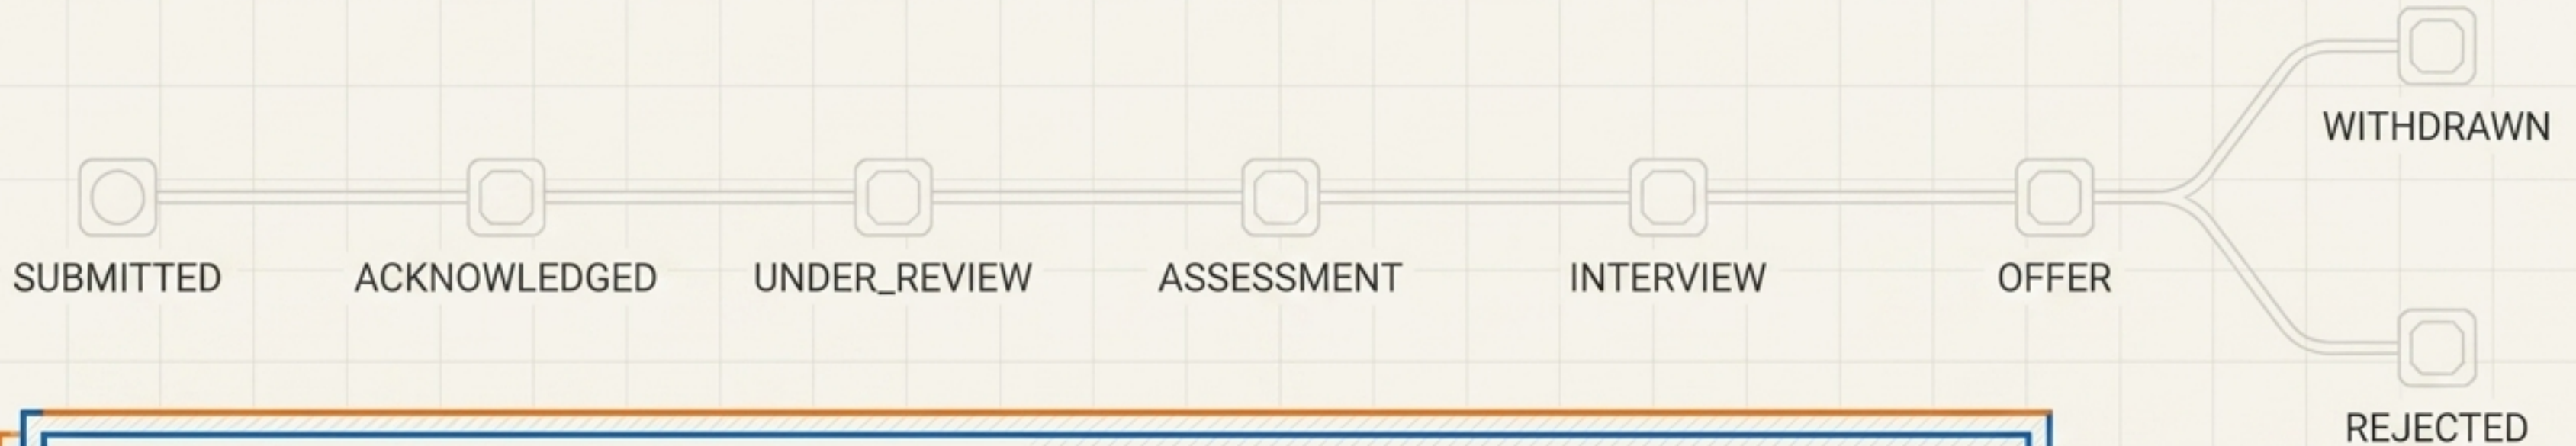

1. Review generated submission kit.
2. Extract canonical application URL.
3. Open external site and manually apply.
4. Return to UI and log exact outcome (Submitted / Not Submitted / Cancel).

Phase 8: Application Tracking Architecture

8

Human Review and Approval Gate

Architecture Status Report

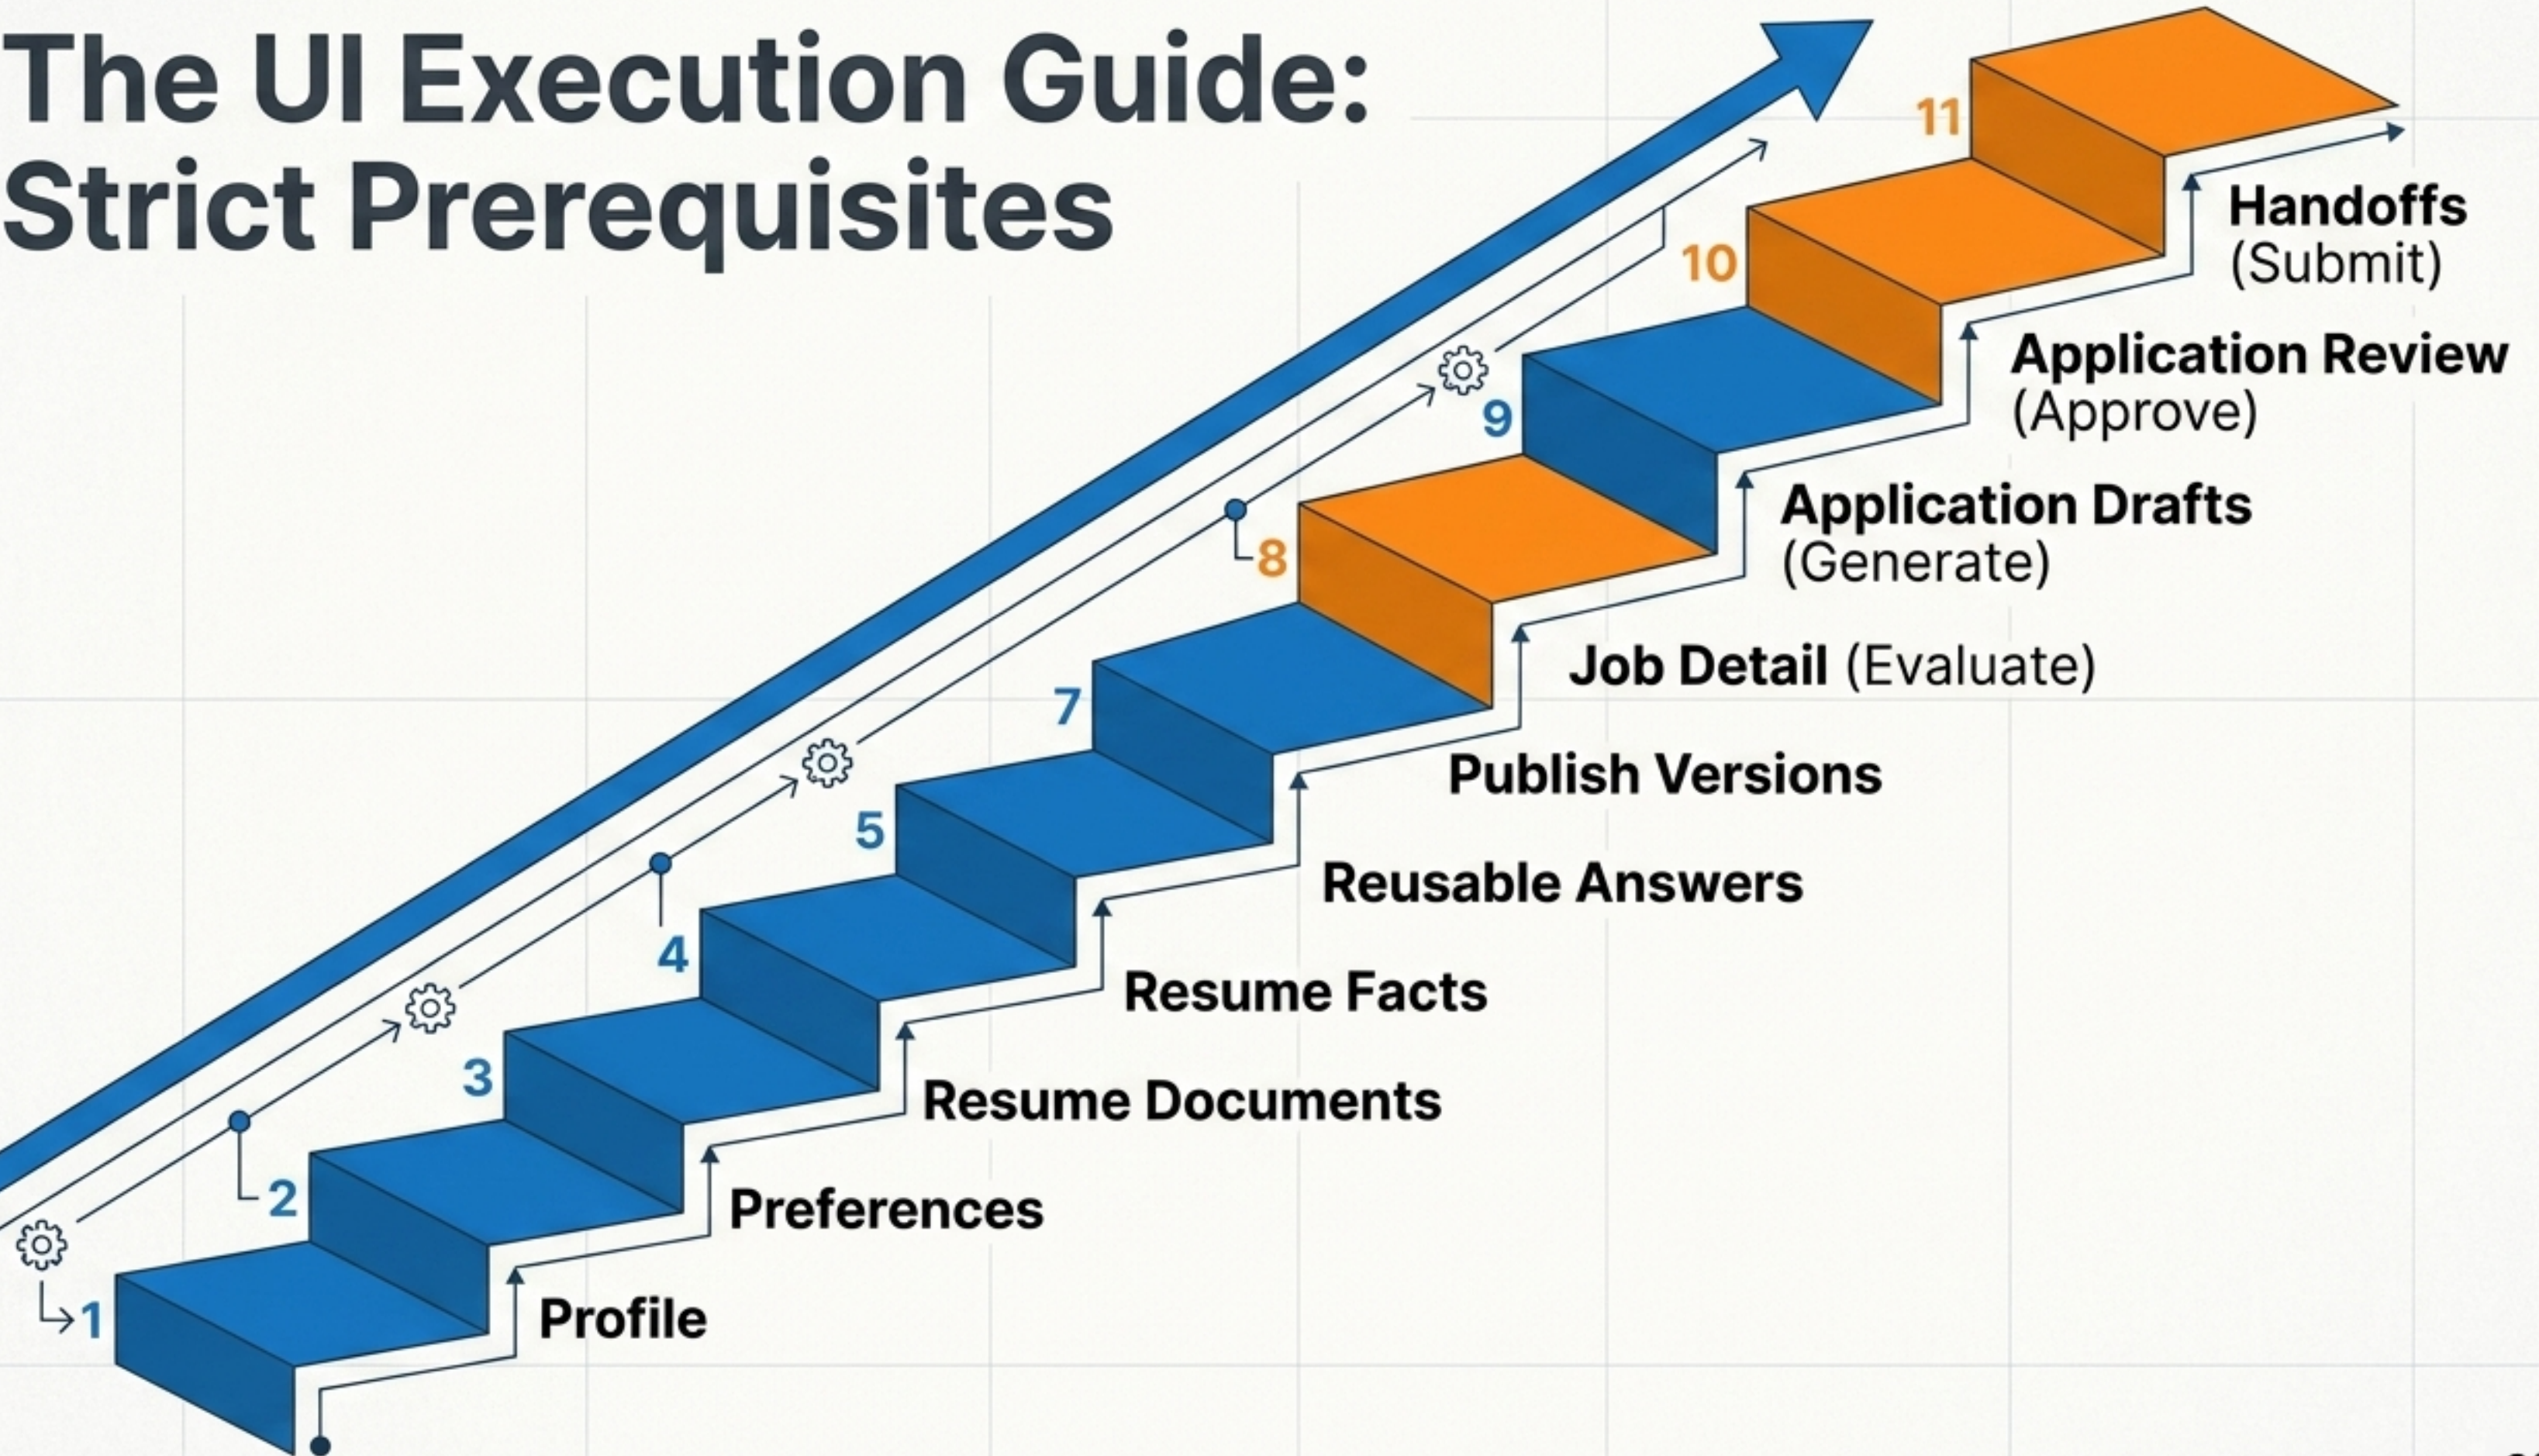

Fully Functional Backend

-  Endpoints (/api/v1/applications) are active.
-  Capable of recording status changes.
-  Capturing notes.
-  Maintaining an immutable timeline.

Frontend Limitation

-  The React Application Tracking UI and navigation item are not yet implemented.
-  Reminder scheduling is currently inactive.

The UI Execution Guide: Strict Prerequisites

Operational Diagnostics: The 404 Rule

If Page = 404 Not Found (During Setup)

Is it a system
outage?

NO

Follow the Prerequisite Chain Backwards

The Principle of Sequential Dependency

The Job Agent Application is an uncompromising linear **pipeline**. A 404 error reliably indicates that an architectural prerequisite earlier in the sequence has been skipped (e.g., attempting to publish without verifying a single fact). **Always check the preceding operational step.**
